

FlexEnterprise

Deliver enterprise satellite services with the support you need to succeed

Bring remote operations into digital transformation initiatives

Extend the reach of Industrial IoT

Deliver temporary coverage for short-term spikes in network demand

Expand quality connectivity to locations regardless of terrain or geography

Complement and strengthen terrestrial-based networks

Enterprises are increasingly expecting to see satellite services as part of the solutions that power their business—over 87% say they are interested in, are looking at, or see areas for growth of satellite services¹. But not all satellite solutions are up to the task of delivering the connectivity enterprises expect along with the services that telcos and global service providers rely on. With FlexEnterprise from SES, getting the support you need and the ability to deliver global enterprise-grade connectivity is easier than ever.

Success depends on your ability to integrate space-based services into your portfolio and the way you deliver

cloud and networking solutions to your customers. With SES's design and support, service providers who are new to satellite can take advantage of space-based solutions just as easily as service providers with years of satellite experience. FlexEnterprise helps you incorporate satellite services into your business.

FlexEnterprise Unlimited Plans make it easy for almost any customer to integrate the benefit of the seamless global Flex network, while FlexEnterprise VNO provides the Flex platform as a service for experienced customers to manage capacity as if it were their own infrastructure.

Benefits at-a-glance

- Power new locations without the delay or cost of deploying fiber or microwave alternatives
- Enable new customer applications with high-throughput capacity for an individual site, a multi-country region, or a global network
- Expand the reach of private networks, enable access to the public internet, or deliver secure connectivity to the cloud
- Choose from platform-as-a-service VNO and per-site satellite-as-a-service options to integrate into your end-to-end solutions
- Leverage economical burstable capacity to manage growth, or fully committed capacity to meet consistent demand
- You control quality of service and the overall customer experience by network, customer, or application

FlexEnterprise LEO: Ordering up global connectivity

For service providers who need a simple way to deliver site-by-site connectivity, FlexEnterprise LEO offers flexible plans that enable you to put the network where your users need it with no wholesale commitments:

- Single-terminal or pooled data plans
- Best-effort, guaranteed throughput, or a mix depending on requirements

These satellite-as-a-service options help you fill network coverage gaps

and extend connectivity to every location of globally distributed organizations regardless of the reliability of local telecom infrastructure. Whether connecting new locations or adding resiliency to existing networks, you can quickly bring up service to support enterprise collaboration and productivity applications with the a network that's not impacted by local fiber cuts, terrain, or climate.

FlexEnterprise VNO: Control wholesale capacity and the economics of your offering

For service providers with experience managing satellite capacity, the FlexEnterprise GEO platform enables you to control a pool of capacity covering a defined regional area or the entire global Flex footprint without adding infrastructure cost and without sacrificing control of the customer-facing service elements that define your business. Combining Flex Service

Regions with Flex Service Plans gives you the flexibility to create the packages and services that meet your unique business and customer needs. With our web-based network management system you have the flexibility to meet different customer demands and business models as you provision, manage, and scale services when and where your customers need them.

VNO customers choose the options that match their service footprint and customers' need by leveraging plans including:

Platinum

Supply 100% fully committed Mbps to serve consistent demand across wide geographies – without the need to manage multiple satellite beams

Access

Deliver burstable, "up to" Mbps providing high-throughput capacity to promote low-cost, low-risk growth across a wide geography

Focus

Augment other capacity on a beam-by-beam basis to support user concentrations and more easily expand into new regions
