

A Robust Solution for the Vast Indonesian Archipelago

SES and Lintasarta bring modern connectivity to the country's remote island populations.

Industry
Telecommunications

Location
Indonesia

Lintasarta is a data communication, internet and IT services provider bringing reliable, affordable connectivity to millions of Indonesians. In partnership with the Indonesian government, they're working to deploy and expand broadband and wireless communications throughout the country.

Customer challenge

Support the Indonesian government's ambitious goal of connecting the fourth-largest population in the world over the country's widely dispersed network of islands.

To meet their ambitious goal, Lintasarta knew that deploying a terrestrial network across hundreds of islands, and thousands of villages,

was logistically and fiscally impossible. And meeting the government's aggressive rollout deadline was equally daunting.

Lintasarta needed a robust solution that could quickly reach Indonesia's island communities while also meeting broadband and wireless connectivity standards and requirements.

How we helped

Provided uninterrupted service using overlapping coverage from two high-throughput SES satellites using C- and Ku-band.

Working with Lintasarta and BAKTI – an agency under the Indonesian Ministry of Communications and Information – SES developed a connectivity solution that enabled reliable, resilient broadband internet and cellular tower backhaul over

the entirety of Indonesia via SES Epic high-throughput satellites.

In addition to providing uninterrupted service to meet government requirements, SES led technical training to prepare Lintasarta for faster implementation of remote sites, more streamlined network management, and to provide a better overall experience for their customers nationwide.

Results

Connectivity for thousands of isolated communities in Indonesia, while meeting government wireless and backhaul standards.

Fast, high-quality, consistent broadband for easy access to government, education and health services and enhanced business operations.

Self-Access Certification and remote access to SES's Remote Management System helped Lintasarta bring remote implementations into their network faster and easier.

SES Epic platform enabled higher network efficiencies previously unavailable without large, costly user terminals—paving the way for network expansion with resilient, high-performance connectivity.
